## **DETAILED ACTION**

## Election/Restrictions

Applicant's election without traverse of group II in the reply filed on 9/24/04 is acknowledged.

# Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 37 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 37 is vague since it can not be determined if the radar and transmitter are being positively recited or if the detector is adapted to detect the radar and transmitter. It is suggested to state "wherein said detector is adapted to detect HF radiation produced by at... transmitter".

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 22, 23, 29, 30, 36, and 37 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Paul et al (5697958).

Art Unit: 3762

Claims 22, 23, 29, 30, 36, and 37 are rejected under 35 U.S.C. 102(b) as being anticipated by Brownlee et al (4091818). Brownlee uses a high frequency detector (elements 42, 31 and 32) for processor (23, 24, and 25) to adjust the pacing rate.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 22-39 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Vock (EP 0931566). Vock shows in figure 2, line a, the detection of interference being a high frequency signal.

In the alternative, Vock states that his system is used to detect an interference signal using known techniques (col 4) but does not state that the interference signal is a HF radiation signal from a radar or radio transmitter. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the interference detection pacemaker as taught by Vock, with the detection of an interference signal being a HF radiation signal from a radar or radio transmitter since it was known in the art that interference detection pacemakers detect an interference signal being a HF radiation signal from a radar or radio transmitter in order to provide an indication to the pacemaker to change operation when a HF signal is detected to prevent interference with pacemaker signal processing, sensing, and control.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George R Evanisko whose telephone number is 703 308-2612. The examiner can normally be reached on M-F 6:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes can be reached on 703 308-5181. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
